

100% Natural Dolomite

Ideal for use on all turf surfaces including golf greens and closely mown surfaces.

SOILFORM MINI DOLOMITE is a highly soluble calcium and magnesium carbonate granule for amending soil pH and correcting nutrient deficiencies. The readily available calcium and magnesium is delivered in a granular formulation that breaks down rapidly following irrigation for even particle distribution and premium soil conditioning.

For greens renovation and high profile turf areas, apply at a rate of 2Kg - 10Kg / 100m².

Use of lower rates are recommended when applying as part of a regular maintenance program. Higher rates can be used during renovation. Irrigate after application to dissolve the granules and to ensure even product distribution through the soil.

- ✔ **Corrects calcium and magnesium levels**
- ✔ **Addresses soil deficiencies**
- ✔ **Adjusts soil pH levels**
- ✔ **Rapidly dissolves**

Contact your GTS Technical Field Agent for more application information.

SOILFORM

MINI DOLOMITE

Typical analysis (w/w)

Calcium (Ca) as Carbonate Total %	18.5
Magnesium (Mg) as Carbonate - Total %	10.5
APPLICATION RATES	
Renovation	Up to 10Kg/100m ² (1000Kg/ha)
Maintenance	2Kg-5Kg/100m ² (200Kg-500Kg/ha)
AVAILABLE PACK SIZES	25 kg, 1000 kg
